

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

Another Note on Buxbaumia

R. S. WILLIAMS

Since writing the note "Buxbaumia in the United States," which appeared in the July, 1900, number of the *Journal of the N. Y. Bot. Garden*, I have received a specimen of *B. aphylla* from Dr. G. N. Best, collected in the State of Washington, by Professor Piper. It is in every way like the eastern *aphylla*, so that the species ranges from one side of the continent to the other, just as *B. indusiata* does. The remaining species, *B. Piperi*, is still unknown from any region east of the Rocky Mountains, I believe. As stated in the note above referred to, this last is entirely distinct from *B. indusiata* in having one-celled immersed stomata, not two-celled and superficial. All the specimens of these three species that I have ever collected were either growing on decayed logs or on fragments of such logs more or less mixed with earth, but Professor Piper states that he has collected specimens on the sides of comparatively recent railway cuts, growing on earth with apparently no sign of decayed wood mixed in.

N. Y. BOTANICAL GARDEN.

A Correction

The name *arenicola* having already been used in the genus *Allium*, I therefore substitute the name *Allium sabulicola* for the species published as *Allium arenicola*, in the Bulletin of the Torrey Botanical Club for September, 1900 (27: 506).

GEORGE E. OSTERHOUT
